SKILLS

Frontend – React.JS, Next.JS, React Native, TypeScript, JavaScript, Redux, HTML, CSS, Tailwind, Bootstrap, Shadcn/UI

Backend – NodeJS, Express, RestAPI, WebSockets, Socket.io

Database – PostgreSQL, MySQL, MongoDB, Prisma

Cloud/Tools – Vercel, Git, imageKit

AI / Emerging Tech – LLM API Integrations (OpenAI, Gemini, Groq), AI-assisted Development, Workflow Automation

EXPERIENCE

Wizzo Technologies — Full Stack Developer

- Developed full-stack web applications using the MERN stack, delivering scalable business applications with strong performance and responsive user interfaces.
- Architected a multi-tenant SaaS platform with AI-driven WhatsApp automation (Node.js, React, PostgreSQL), designing tenant-isolated database routing, a RAG-based LLM pipeline for automated customer engagement, and end-to-end billing/e-invoicing workflows.
- Designed and implemented secure workflow features including OTP verification, request lifecycle completion flows, approval pipelines, and role-based access control systems.
- Designed and built a real-time AI-integrated parking & gate access control system (React, Node.js, Socket.io, MySQL) with live ANPR camera integration, automated hardware barrier control, and rule-based vehicle validation.

PROJECTS

Memoir

[Project Link](#)

React JS, Node JS, MongoDB, Tailwind, Clerk, imagekit

- Developed using React and JavaScript to deliver a dynamic, efficient, and modular user interface for both authoring and consuming blog content.
- Integrated Clerk for seamless user authentication, enabling secure and reliable user management with minimal overhead.
- Implemented a blog creation playground, allowing authenticated users to draft, preview, and publish posts with live editing capabilities and instant feedback.

Wheel-Deal

[Project Link](#)

React JS, Node JS, MongoDB, Tailwind, imagekit, JSON Web Tokens (JWT)

- Developed and deployed a full-stack car rental platform using MERN (MongoDB, Express.js, React.js, Node.js), delivering a seamless booking experience with dynamic listings and admin-managed inventory.
- Implemented secure user authentication using JWT (JSON Web Tokens), ensuring protected sign-up, login, and booking workflows for both customers and administrators.
- Built a complete booking workflow with location/date-based car listings, reservation capabilities, and an intuitive admin dashboard for managing inventory and user bookings.

EDUCATION

Bachelor of Commerce specialized in CA, University of Calicut

Mar 2020 - Mar 2023
